## Pre-Visit Preparation Guide

## Before we arrive

Please read and keep for future reference.

Before the Pest Control Officer arrives to commence treatment you must carry out the following preparations:-

- ✓ To carry out a really effective treatment we will need to get access to all areas that the moths are being found. Remove all items from the floor areas of the rooms to be treated.
- ✓ Some moths are found throughout a property so all floor areas may need to be cleared prior to our visit.
- ✓ Other moths are found in more localised areas such as kitchen cupboards. These may need to be emptied and cleared of all items to allow a more targeted treatment. The pest control officer will specify specific preparation needs during the survey visit.
- ✓ Thoroughly vacuum all carpets and rugs and clean all carpet free floor areas. Pay particular attention to areas where moth larvae may be able to hide unnoticed. Empty the vacuum cleaner directly into the dustbin or change the bag after cleaning.
- ✓ People and domestic pets must leave the rooms being treated and not be allowed to return until the insecticide is dry. Cover fish tanks and all electrical appliances.

If you do not carry out these preparations the Pest Control Officer **will not** carry out the treatment and you will lose your fee.

## Once we have left

After the Pest Control Officer has carried out the treatment

- ✓ Do not enter these rooms for at least two hours or until the Officer advises.
- ✓ Do not vacuum the carpets or clean the treated area for at least 14 days to allow the insecticide time to work.

One treatment may not be sufficient to control the infestation but the products used carry on working for some weeks. The moths should die off gradually after coming into contact with the insecticide.

If there is still a problem 14 days after the original treatment you can contact us to book a new visit. Moth treatments are for one visit only so you will be charged for each visit you book.

Unfortunately we can offer no guarantees for completely eradicating this type of pest.
